/'brävä/

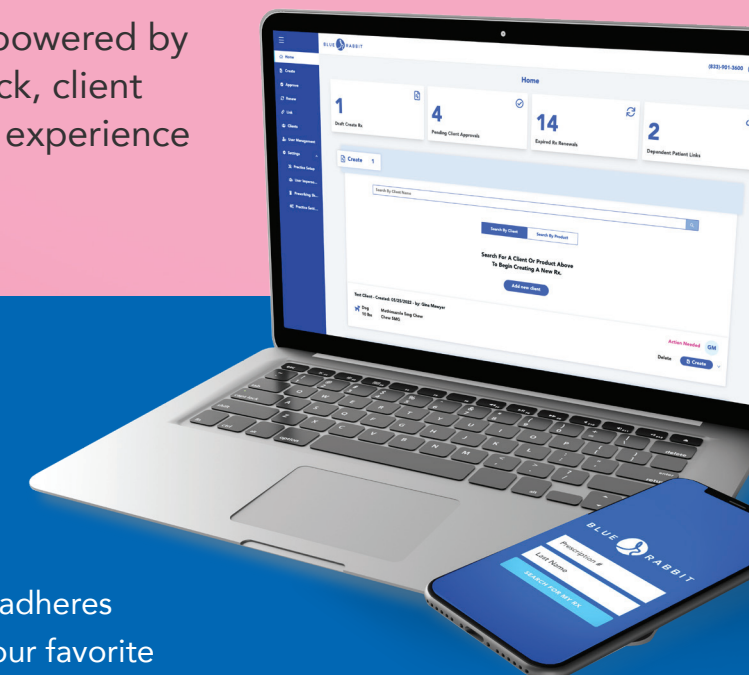

Brave, good, clever, a celebration with applause...  
or a joyful tail wag from a four-legged friend.

Imagine a world where veterinarians, pet owners and the animals in their care are celebrated every day.

Brava brings together decades of expertise in veterinary pharmacy and animal health technology to provide best-in-class compounding pharmacy solutions, effortless administration of care, competitive pricing, and dedicated customer service.

Our PCAB-accredited pharmacies—including two sterile compounding facilities—provide a complete formulary, and our team of pharmacists continue to develop innovative preparations for your most complex needs.

Brava's fully-integrated technology platform, powered by Blue Rabbit, offers e-prescribe, PIMS write back, client auto ship, and fast refills to ensure a seamless experience for your medical team and your clients.

## BRAVA PHARMACIES 2022 COMPOUNDING CATALOG

### RVP is now Brava

As Brava, RVP's unprecedented quality in sterile preparations, service and pet owner experience will now make compliance easier than ever before.

**GOLDEN GATE VETERINARY  
COMPOUNDING PHARMACY**

For the past 20 years our pharmacy, Golden Gate Veterinary Compounding Pharmacy, has been producing the highest quality compounded medications, frequently conducting potency tests with an independent FDA approved lab to ensure top quality and compounding technique and validate the efficacy of every medication.

**PACIFIC PHARMACY  
SOLUTIONS**

Our state-of-the-art affiliated lab, Pacific Pharmacy\*, adheres to the highest standards, providing access to all of your favorite sterile preparations, with phenomenal quality and service.

\*Licensed in California

TRANSDERMAL GELS

No mess,  
no fuss.  
Accuracy you  
can trust.

Our transdermal applicators provide **targeted, reliable dosing with every click**, providing prescribers the ability to titrate dosing as necessary with one syringe.

- Easy to administer to cats
- Accurate dosing
- Virtually no mess

Most Popular Medications

Methimazole

Fluoxetine

Prednisolone

Amitriptyline

Amlodipine

**ACCREDITED**  
COMPOUNDING  
PHARMACY

Transdermal gels are an alternate method of drug delivery in felines. They are formulated in a penetrating gel base that is applied to the hairless area at the inside tip of the ear. The medication is absorbed through the skin which can be easier to medicate a feline who refuses to consume anything orally. We offer 2 applications for our transdermal gels: our traditional 1ml syringe method where the pet owner will wear gloves and massage the gel into the skin, and our Topi-Click Micro transdermal gel pen.

Our Topi-Click Micro pen is extremely accurate and easy to use with virtually no mess. All the client will need to do is twist the pen as directed, wait a few seconds, and use the soft plastic tip to directly apply the medication to the ear. We are very pleased with our Topi-Click Micro pens, we know your client and patients will be too!

MICRO TABLETS

Our Micro Tablets are very small and easy to administer. They're uncoated and compressed, so they dissolve rapidly, making medicating your patient quick and easy. They are available for many medications up to 50mg concentrations. These are one of our most cost-effective preparations. For a list of our common drugs and strengths, reference our table below.

Common Medications & Strengths

Budesonide	1mg, 2mg	Metronidazole	25mg, 50mg
Cisapride	2.5mg, 5mg, 10mg	Prazosin	0.5mg
Ursodiol	50mg	Terbutaline	1.25mg
Gabapentin	25mg, 50mg		

# ORAL SUSPENSIONS & GUMMY TREAT FLAVORS

Our liquid suspensions come in a wide variety of flavors which will satisfy any species' palate. Generally certain pets prefer different flavors. The list below should help determine which flavor is suitable for your animal.

Dogs	Beef, Bacon, Chicken
Cats	Tuna, Chicken, Vanilla Butternut
Birds	Apple, Banana
Rabbits	Apple, Banana
Rodents	Banana, Tutti Frutti
Ferrets	Banana, Fish, Tuna

- Top Flavors!
- Apple
  - Chicken Pot Pie
  - Crispy Bacon
  - Fish
  - Grilled Tuna
  - Red Angus Beef
  - Tuna
  - Tutti Frutti
  - Vanilla Butternut
  - Marshmallow

## CHEWS

# Administering meds in a treat pets love

Our signature soft chews come in multiple flavors (including hypo-allergenic) and are ideal for those “harder-to-pill” pets. Administering medication as a handcrafted treat is much easier, **helping foster the bond between a pet and their caregivers.**

- Most compliant oral dosing form
- Cost-effective formulation
- Accurate dosing titration to half strengths

To help patients receive the correct dose and avoid spitting out their medication, each of our chews is handmade with the medication or combined medication evenly mixed throughout each chew. This allows chews to be cut in half if dosing is needed twice a day.

NEW!

## NEXT GENERATION EAR PACKS

Our next generation ear packs takes treating chronic ear infections to the next level! Our proprietary blend of ingredients truly creates a one of-a-kind compound, with virtually no mess.

Our next gen ear packs are a 1ml, aqueous base compound that can be stored at room temperature. After a proper ear cleaning and flush, our ear packs are applied directly into the ear canal of the patient. Once this has been done massage the ear for 2-3 minutes while holding the ear flap shut. Your patient will want to shake its head, no need to worry, this actually helps coat the ear canal. After this process has been done, your patient is good to go! We recommend a follow up appointment in about 10-14 days.

In addition to our Next Gen bases we also offer **Traditional Lanolin**, and **Soothing Poloxamer Gel Base**, a concentrated aqueous, thermo-reversible solution (a liquid when cold that warms to a gel in the ear).

## OTIC EAR PACKS

One time treatment for chronic ear infections. Typically containing three medications, the lanolin based gel is placed deep into the ear canal of that animal. Within 5 minutes the gel hardens and releases medication over a full 10-14 day treatment. This method of treating ear infections enhances the compliance with both the pet and the client. Set it and forget it!

### Available Formulas:

- Enrofloxacin Ketoconazole Triamcinolone
- Amikacin Ketoconazole Triamcinolone
- Mupirocin Ketoconazole Triamcinolone

### Common Formulations:

- Enrofloxacin Ketoconazole Triamcinolone
- Amikacin Ketoconazole Triamcinolone
- Enrofloxacin Miconazole Dexamethasone
- Marbofloxacin Ketoconazole Triamcinolone
- Gentamicin Ketoconazole Triamcinolone

## ORAL SUSPENSIONS

Oral Suspensions are a good alternative for any patient who refuses to take a capsule, and would rather have a flavored liquid medication. We can compound flavored oral suspensions for just about every species of animal.

Sourcing USP grade flavoring agents, we're confident that we are able to accommodate even the most discerning of palates. We can even mix flavors if your patients prefer something like a chicken marshmallow... YUM!

Ask our pharmacists for particular recommendations, including hypoallergenic options.

## EXOTIC GUMMY TREATS

Our new Exotic Gummy treats are a tasty formulation developed mostly for pocket pets, rabbits, reptiles, birds, and senior canine patients who have a hard time chewing. These exotic gummies are of similar taste and consistency of a gummy worm or gummy bear, and truly offer an appetizing option for pets who may prefer something chewy over a liquid. We tend to recommend sweet fruity flavors, but are always willing to do other flavors upon request. Sample non-medicated gummy treats are available upon request.

CAPSULES

Capsules are a good option for bitter tasting medications, and are an economical compounded formulation. They’re available in a variety of sizes and colors, so pet owners who have pets on multiple medications, won’t get them confused. We have the capability of combining more than one medication into a single capsule, with the ease of administering one capsule instead of two or three.

EMERGENCY NEEDS

Sterile Injectables & Ophthalmics

Utilizing state-of-the-art labs, we provide a comprehensive sterile formulary including injectables, chemotherapy agents and time sensitive eye medications

Diazepam Rapid Melt Gel

Our Diazepam Rapid Melt Gel is a semi solid, fast acting rectal gel.

K9 Rescue Kits

All inclusive kit to administer either Apomorphine or Naloxone on site in the event a working K9 ingests a toxic substance. Includes (2) syringes 1 prefilled with either drug, needle, 10ml sterile water, lure lock and either a micron filter or nasal tip depending on the kit. Our rescue kits come packaged in a light protected bag.
